СИСТЕМЫ ДОЕНИЯ CLASSICPRO GQ, CLASSIC TEAT LINER Технические характеристики

ClassicPro GQ - innovative flexibility for perfect milking results and teat condition

ClassicPro GQ is the name of the unique new silicone liner from G EA for the Classic 300 milking cluster. Benefit from the well thought-out, new design - because the round liner is square inside:

What does this mean for you?

Its particularly good adherence during milking, even with small teats, leads to fast stripping which is gentle on the teats. You thus benefit from healthy cows and efficient milking in one package.

Anti-twist device for a good fit - no twisting of the silicone teat cup liner in the shell - for full functionality.

Optimum adaptability - the conical shaft and the unique folding pattern lead to the proper milking of a broad range of teat sizes and shapes.

Flexible milk hose for optimum positioning - with the single-piece silicone liner no sight glass is needed. This leads to greater flexibility and ideal positioning under the udder.

Aeration nozzle - the vent on the short milk hose supports the milk transport during times of high milk flow - and is thus an interesting option for high-yield herds in particular. An un-vented version of the ClassicPro GQ is also available.

You have the choice of shells. The black composite shell (recommended for 3x milking per day only) is lighter, the steel shell is proven. In combination with the ClassicPro GQ, they ensure an ergonomically perfect milking experience for both the milker and cows.

Practical experience with the Kelder family:

The 11 O dairy cows of Arjan and Gerrit Kelder have now been milked for more than 12 months using the ClassicPro GQ.

„In fact, I've been quite happy with the previous liners, but I wanted to try out something new in silicone.

We milkers were surprised how quick and simple the attaching has become for us. We even take a shorter time to milk, with less air leakage and the teat condition is excellent!

We save both time and effort when we replace the liners, because the ClassicPro GQ is a single-piece.

We've noticed that the cows, in particular our heifers, are really calm and relaxed during milking."

A unique design for efficient milking - the shape of the barrel gives a perfect massaging effect throughout the milking process.

A small head for small teats - the small head (height and diameter) ensures perfect massage and perfect milking, particularly for short and closely grouped teats.

We recommend: Simply try it out!!!!

Classic Teat Liners – always the best fit!

Faster milking without extra handling
For maximum yield and optimum cow comfort
the best liners fit the teats - like a glove.

An optimum fit is offered by the GEA Farm Techno-logies Classic Teat Liner - especially suited to narrow teats:

for a perfect fit on the udder

- reduced air admission
- improved adhesion to the teats
- less slips
- optimum milk extraction
- higher throughput

for improved udder health and teat condition

Precise measurement of the teat: means correct liner fit to maximise milk yields.

The advantages of a 3 piece liner:

1. The combination of teat liner, sight glass and short milk tube allows flexible adaptation to suit any udder conformation.
2. Short milk tubes of different lengths can be used and changed as required.
3. Milk flow can be seen through the sight glass: for better milking observation.

Recommended use for 7021-2725-350

Breeds					
Space between rear teats			Ø of the teat from 20 to 27 mm		
Teat shape:					
Shaft:	cylindrical	cylindrical	conical	conical	
Base:	angled	funnel-shaped	angled	funnel-shaped	
Special features	also for StimoPuls	Vacuum - milking parlour 38-42 kP - stanchion barn 42-45 kP		Only for the fold away CIP unit with support ring.	
Replacement interval / Service life	6 months*	or	750 hours of operation*		

* whichever is earlier
