КЛАПАНЫ И КОМПОНЕНТЫ D-TEC

Технические характеристики

OPTIMIZED PROCESS AND PRODUCT SAFETY

D-tec® Double-chamber valves are used for the mixproof shut-off of incompatible products at pipe junctions.

The double-chamber valve represents a special version of the double-seat valve, in which the leakage chamber is designed as a sterile chamber and hermetically separated from the environment by means of two side valves. With the addition of the D-tec® D/DV to the GEA valve portfolio it is possible to equip process systems even more consistently with the renowned D-tec® stem diaphragm technology.

Reliable media separation

Due to the hermetically sealing diaphragm, D-tec® stem valves achieve a higher standard of hygiene, which, particularly in the food, beverage and dairy industry, contributes to an increased product quality and the longer minimum product shelf life demanded by the market.

Available designs

D-tec® Double-chamber valves D/DV are available with different configurations of the side valves, e.g. different fail-safe positions and an integrated temperature sensor. In addition, the valve seat seals are available as both hard- and soft-sealing – the former with a TEFASEP® gold seals.

TEFASEP® gold valve seat seals are designed to meet all requirements for hard-sealing concepts, from traditional applications with simple hot cleaning to high-end applications with demanding sterilization-in-place processes.

For seamless process integration, the valve can be operated with one, two or three T.VIS® Control tops in various versions configurations.

D-tec® Shut-off valve type N/DV

D-tec® Shut-off valves are used for the controlled opening and closing of pipelines. The valves are an ideal fit for UltraClean applications but can also be operated aseptically.

D-tec® Tank bottom valve type N/DV

D-tec® Tank bottom valves are used for the monitored control of fluids at tank applications. The valves are an ideal fit for UltraClean applications but can also be operated aseptically.

D-tec® Divert valve type W/DV

D-tec® Divert valves are used for divert functions in processing plants. The valves are an ideal fit for UltraClean applications but can also be operated aseptically.

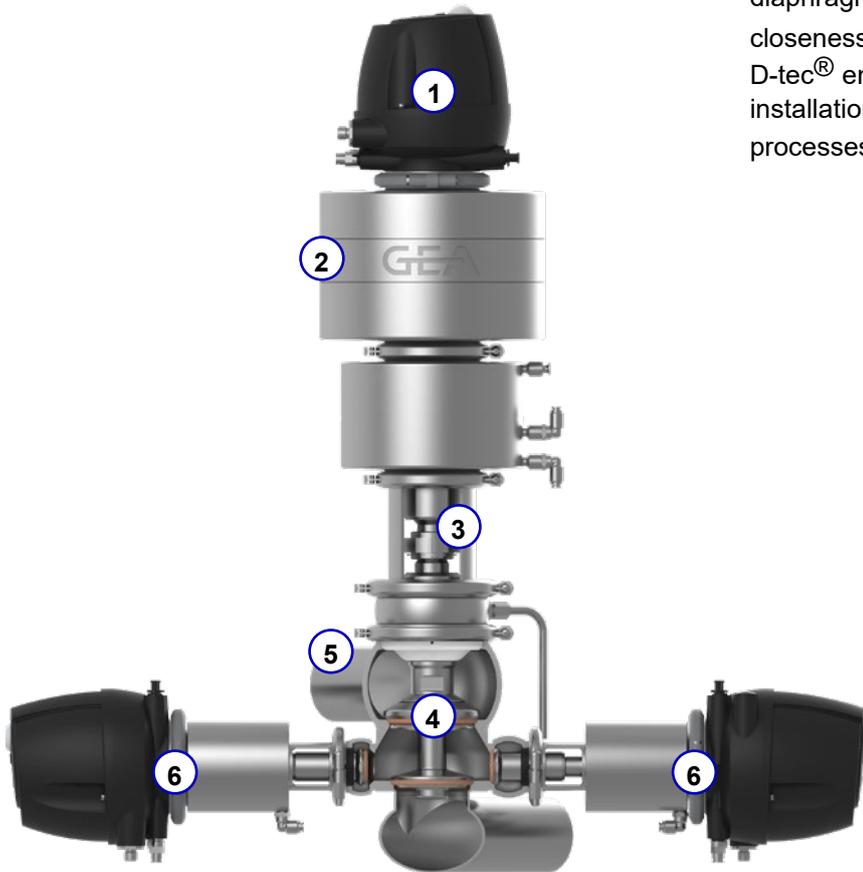

D-tec® Control valve type P/DV

D-tec® Control valves are used for the exact setting and control of parameters such as flow, pressure, temperature, or filling level in processing plants.

D-tec[®] Modular valve system

The D-tec[®] valve line offers everything required to entirely equip a process line with state-of-the-art stem diaphragm technology. Furthermore, thanks to its closeness to the known VARIVENT[®] hygienic valve line, D-tec[®] enables a simplified upgrade of existing hygienic installations to meet the requirements of ESL/UltraClean processes.

See all the D-tec[®] valves on our homepage

1 Feedback systems

D-tec[®] double chamber valves can be either equipped with open feedback units or T.VIS[®] control tops by default. The degree of automation at the valve can be adapted to customer needs by means of using one, two or three independent control tops.

2 Actuator

The main valve is equipped with two actuators by default. The main actuator is used to move the valve from its normally closed fail-safe position to the fully open position by applying pressurized air to the internal air supply. The lifting actuator on the other hand is used to lift the two valve seats of the main valve independently during CIP or SIP.

3 Lantern

The lantern connects the lift actuator with the product-wetted parts and simultaneously prevents the system from heat transfer between these two valve sections. The lantern has an important supporting and clamping function for the upper D-tec[®] stem diaphragm and is furthermore designed for a safe and easy visual detection of leakages.

4 Internal assembly

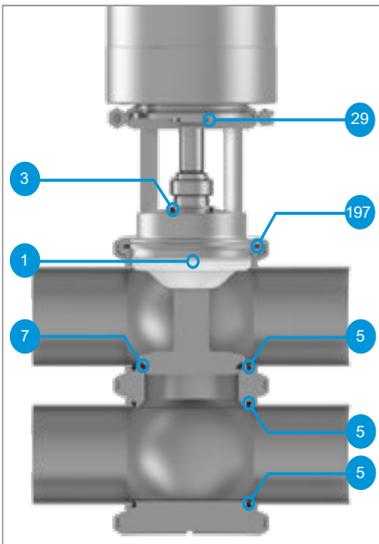

The hermetically sealing D-tec[®] stem diaphragm is the key element of every D-tec[®] valve. It is characterized by a very long service life, high dimensional stability with temperature resilience and cleanability. The internal assembly of a D-tec[®] double chamber valve includes two valve seat seals by default which can be equipped with soft-sealing (i.e. EPDM) or hard-sealing (TEFASEP[®] gold) materials. The lower valve seat corresponds with the nominal width of the valve.

5 Housing

Housings for D-tec[®] double chamber valves are available with three or four connection ports. The valves are produced with standard butt-weld connections suitable for orbital welding by default. Mixed connection port sizes as well as various pipe connections are available upon request

6 Side valves

The sterile chamber includes an inlet and an outlet valve by default. The fail-safe position (NC or NO) of both side valves can be chosen independently from each other. The outlet can be equipped with integrated temperature probe which enables temperature measuring in the sterile chamber. In addition, the outlet can be configured with a divert valve to directly apply a sterile media also to the drain side of the valve.

Valves with valve disc soft sealing

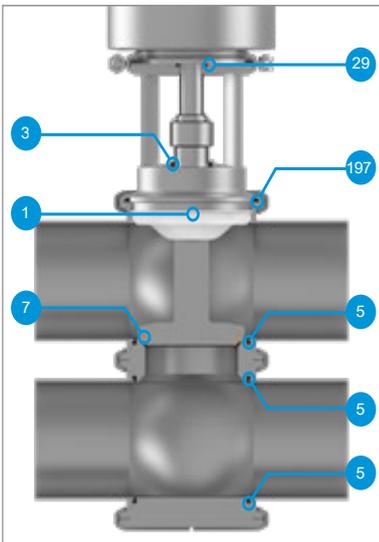

The illustration of a single-seat valve D-tec® type N/DV shown here represents an example of the configuration of a seal kit for a shut-off valve with valve disc soft sealing.

Chiefly, a seal kit consists of all of the seals for the particular valve that come in contact with the product. The precise components of all seal kits and information about maintenance can be found in the associated operating instructions.

Typical application and description

From Hygienic to UltraClean – D-tec® conversion kit for VARIVENT®

The D-tec® conversion kit makes it possible to convert existing systems from a hygienic stem diaphragm sealing to the D-tec® diaphragm for achieving UltraClean production conditions. Using components that prevent exchange with the exterior atmosphere simplifies the production of demanding and sensitive products and advances product shelf life.

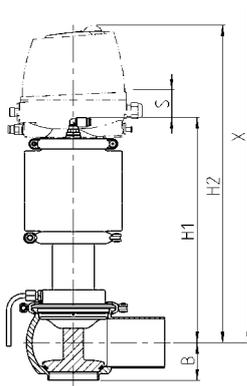

D-tec® valves are used especially in the food, beverages, biotech and dairy industries.

Product versions with 3-A certificate are optionally available.

Please contact GEA Aseptomag AG if you are planning new aseptic applications!
