СИСТЕМЫ УПАКОВКИ И РОЗЛИВА FOODTRAY Технические характеристики

GEA FOODTRAY

Sustainable food packages

MAP, vacuum and skin packages are greatly contributing to ensuring food safety and prolonging shelf life. To protect the environment with sustainable solutions, we at GEA are committed to reducing the use of plastic in food packaging. One example of a smart solution: The cardboard-based GEA FoodTray now uses this renewable and recyclable resource as a carrier for a comparatively thin bottom film. During the thermoforming process, both are combined to create a stiff and yet sustainable tray which is then sealed to make a high-quality food package. It enables manufacturers to be more sustainable while still ensuring food safety and reducing waste.

Main Applications

GEA FoodTray sustainable packaging

The resource-saving GEA FoodTray is a high-quality MAP food package produced in a form-fill-seal process to preserve food products, such as meat, meat substitutes, fish and seafood, dairy or bakery products, safely.

Key benefits

Sustainable and resource-saving alternative to MAP or vacuum packs made of plastic only

Saves up to 80% of plastic material compared with conventional food packaging

Can completely be made of recycled and recyclable materials (paper and film)

Easy separation of paper and plastic parts

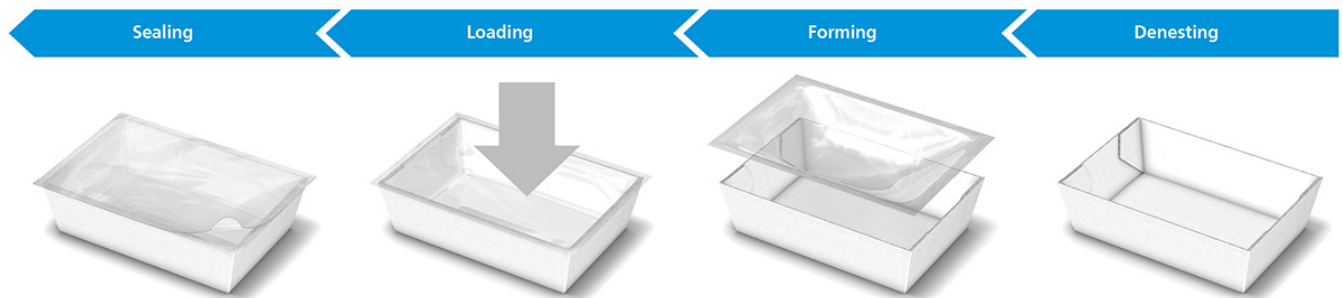

Fully recyclable and sustainable

Eye-catching design opportunities

Cardboard allows all kinds of printing options to make a product more attractive, and make space for additional printed information, even in small batches

To be used with the GEA PowerPak and PowerPak PLUS thermoformers

GEA FoodTray in-line production process

The GEA FoodTray can be assembled easily and automatically in a form-fill-seal system such as the GEA PowerPak or PowerPak PLUS in 4 steps:

1. Denesting

A denesting and loading unit automatically transfers single units from the stacks of pre-manufactured cardboard trays to the forming station of the thermoformer.

2. Forming

In the forming system a thin flexible bottom film is formed into the trays by vacuum and compressed air. The film is then spot sealed to the upper rim of the cardboard trays using heatable plugs.

3. Loading

The trays are filled with the designated products, either automatically or by hand.

4. Sealing

In the sealing station, the FoodTrays are covered with the top film, which is then sealed to the bottom film.

Technical Data

Outer Material	Cardboard printable with up to 6 colors + laquer finish
Inlay	Flexible thermoforming film with special, low shrinking technology
Top film	Thermoforming film or paper compound printable with up to 11 colors + laquer finis
Sizes	Height 20- 60mm
Processing capacity	45 – 90 packages/minute
