# СИСТЕМЫ ДОЕНИЯ

## IQ

### Технические характеристики

## IQ. The milking cluster that sits, fits and does not slurp.

The combination of maximum flexibility and optimum weight distribution ensures that your IQ is always securely adhered to the teats.

Maximum flexibility in the part of the short milk hose. Neither nipples nor sight glass. The shape trimmed for maximum flexibility. Everything has been done to ensure optimum adaptability – regardless of the udder shape!

Fine adjustment of the claw centre of gravity and the optimal positioning of the hose connection always keep your IQ in the correct position. The weight sits precisely where it is needed: 80 % on the teat and 20 % in the milk guide piececlaw. Quick and non-stressful milking of all four quarters of the udder can be realised without any air ingressions and with a high throughput.

## Milk production with the IQ: Intelligent down to the last detail

Its revolutionary four-way technology ensures that you always have maximum milk quality, quantity and udder health.

Using it is incomparably easy!  
Easier attaching, milking and maintenance.

# **IQ. Four ways to get better milk quality.**

The revolutionary milk guide piece has been designed following the natural structure of a cow's udder: It is sub-divided into 4 guide chambers.

As opposed to conventional systems the milk is no longer collected any more, the milk is lead quarter individual and channelled to the outlet. Thanks to the incline in the respective cluster chamber this process is now faster and much more gentle. Consequently, your IQ will prevent teat-to-teat cross-contamination and the udder will remain healthy.

# IQ. The milking cluster with hygienic assurance.

Attach them however you want!

Your IQ can work with any attachment routine.

The automatic vacuum switching system only activates the full vacuum for each of the four quarters when the teat cup has been closed by the teat. The vacuum remains stable and this means that air slurps and slushing contamination of the milk path are virtually eliminated by our IQ system. The result: an easy way to guarantee clean milk.

# **IQ.**

## **The easy working comfort highlight.**

Using and maintaining the IQ is easier than ever before.

The high removal centre of gravity ensures that the teat cup always hangs in such a way that the cluster is immediately ready for reuse operation. The automatic vacuum switching system enables you to attach the teat cups silently, quickly and using an ergonomic posture. It's entirely up to you whether they are attached one after the other or all four simultaneously.

The shape of the silicon liner is well thought-out: You will save a lot of time when changing them and you will no longer need to use great force, which means that tool-free maintenance is now possible. No more fitting errors – therefore easy working is guaranteed!
