СИСТЕМЫ МАКАРОННЫХ ИЗДЕЛИЙ, СУХИХ ЗАВТРАКОВ И ЗАКУСОК PRC, PRL, PRP Технические характеристики

PRL

Lobe pump

Machine designed to dose soft fillings with a lobe pump. The filling is loaded on the hopper, where a rod-breaker system pushes the filling towards a screw that feeds the lobes placed below. The lobes are pulled thanks to a gearmotor controlled with inverter that doses the product on the next machine in line.

In order to ease the washing process, the machine presents different features. It has a stainless steel structure, a safety hinged top grid, a stainless steel hinged hopper, a rotating system with scraper to

ensure product removal from the inside walls of the hopper, removable pushing screw and helicoidal dosing lobes in detectable plastic which resets the pulsation of doses of the pump. The frame is equipped with wheels to facilitate the movement of the machine.

The PRL can work with soft fillings with humidity going from 45% to 70%.

Machine Performance

- Production capacity 100-500 Kg/h

PRC

Screw pump

System designed to dose hard fillings through screw pump. The filling is loaded on the hopper and a rotating reel feeds the dosing screw, which is pulled by gear motor, doses the product on the next machine in line.

From a structural point of view, the machine features a safety top grid which is removable in order to ease the cleaning operations. The dosing screw is in plastic material, while the tank is in stainless

steel, which eases the washing process. The supporting frame is equipped with wheels to facilitate the movement and placement of the machine.

The PRC can work with hard fillings with moisture going from 35% to 50%.

Machine Performance

- Production capacity 100-400 kg/h

PRP

Paddle pump

Machine designed to dose creamy fillings with a lobe pump. The filling is loaded on the hopper, where a rod-breaker system pushes the filling towards a screw which feeds the lobes placed below. The lobes are pulled thanks to a gearmotor controlled with inverter which doses the product on the next machine in line.

In order to ease the washing process, the machine presents different features. It has a stainless steel structure, a safety hinged top grid, a stainless steel hinged hopper, a rotating system with scraper to

ensure product removal from the inside walls of the hopper, removable pushing screw, paddle in plastic material, cam for paddle movement in stainless steel. The frame is equipped with wheels to facilitate the movement of the machine.

The PRP can work with creamy fillings with chunks up to 15mm in size and with humidity going from 60% to 95%.

Machine Performance

- Production capacity 100-600 kg/h
