СИСТЕМЫ АВТОМАТИЗАЦИИ И УПРАВЛЕНИЯ SMARTCONTROL HMI Технические характеристики

GEA FOCUSES ON DIGITALIZATION, SUSTAINABILITY AND APPLICATION EXCELLENCE

GEA, a global player in the food industry, will showcase its most recent food processing, freezing and packaging innovations, which bring important benefits in sustainability, digitalization, product quality and productivity. Outstanding application excellence in the fields of poultry, other meat and plant-based foods will also be key topics. GEA is dedicated to offering comprehensive technological solutions that equip its customers today for the challenges of tomorrow.

GEA will showcase digital excellence at IFFA - including a fully automated slicing and packaging line for calibrated products that uses recyclable mono-material film. The line comes up with numerous innovations.

Digital Empowerment

To showcase its strong technological offering at IFFA, GEA will exhibit a complete, fully automated, slicing and packaging line for calibrated products that uses recyclable mono-material film. This 24-meter-long line includes the GEA OptiSlicer 6000, a newly integrated robot loading function, the PowerPak PLUS thermoformer with new and unique heating, evacuation

and gas injection systems, the new TiroLabel PLUS labeling equipment and a new, end-of-line converger system developed by GEA.

Critical equipment is digitally enhanced by the new GEA SmartControl HMI (Human-Machine-Interface) platform, which offers easy operation based on user roles, increased process safety through version control and logs, access to historic data, and open interface integration with

other line equipment. The slice-pack line at the exhibit will also demonstrate GEA LineControl, a digital management platform which can automatically orchestrate the process across the entire line based on pre-programmed scenarios. This feature increases safety while reducing downtime, rework and waste of energy and resources, ultimately enabling food processors to work more efficiently and deliver better quality products.

The innovative, digital GEA SmartControl HMI (Human-Machine Interface) platform is also new. It offers easy operation through different operator profiles and increases process reliability.

Condition Monitoring System Predicts the Future

At IFFA, the slicing and packaging line will be connected to a condition monitoring system, part of the GEA PerformancePLUS service program, continuously tracking in real time the performance and condition of the line in general and each machine in detail. This digital solution prompts the user when the equipment needs maintenance, service or repair, and provides real-data insights on how to improve daily operations
